

Utilities: Apartments LTHW Boiler Hire

The challenge

A management company required a temporary boiler installation to assist during the planned replacement of existing site boilers for a block of 330 luxury apartments and swimming pool in the centre of London

What did we do?

Our experienced Boiler Specialist leading the enquiry worked closely with Watkins Hire's service and transport department and successfully arranged the quick turnaround of the required equipment to site ready for installation and commissioning.

How did we do it?

Watkins Engineers installed and commissioned a 1200kw oil fired boiler connected to a 1500kw PHE with a 4" booster pump which, in turn, was connected via 44 6m 4" flexible pipework to the existing boiler room located within the building's basement.

The Result

The LTHW Boiler, PHE and Booster Pump was delivered to site and installed and commissioned within the required timescale. This resulted in uninterrupted hot water services to both the apartments and the swimming pool during the replacement of the existing site boilers.

Watkins Hire equipment installed at the luxury apartment building in central London

- EQUIPMENT** LTHW Boiler, PHE and Booster Pump
- END USER** Luxury Apartment Building Management Company
- APPLICATION** LTHW Boiler for site hot water supply
- ADDITIONAL** Flexible Pipework and Fittings
