About Us

Founded in 1943, the Institute of Healthcare Engineering and Estate Management (IHEEM) is a specialist Institute for the Healthcare Estates sector. As an international professional Engineering Institute, IHEEM informs and implements government policy such as the recent Lord Carter Review on improving productivity and performance.

As a membership organisation with over 1650 members, IHEEM offers packages for individuals and affiliates such as NHS Trusts, Universities and Companies.

IHEEM is a founding member of the International Federation of Hospital Engineering developing partnerships across the world and has a network of 12 regional branches in the UK, and 2 overseas in the Republic of Ireland and Hong Kong.

A key role of the Institute is to keep members and industry professionals up to date with developing technology and changing regulations which affect the sector. One of the ways IHEEM does this is through the various technical seminars and conferences that the Institute organises. These provide a great opportunity for attendees to broaden their knowledge, upskill, debate key issues and share best practice with peers.

IHEEM WALES 2016 is a joint venture between IHEEM and the IHEEM Wales regional branch who have been working closely to produce an innovative event, that shares best practice and technical knowledge and provides key learnings.

IHEEM WALES 2016

New to the IHEEM events calendar this summer is the IHEEM WALES 2016 Regional Conference and Exhibition.

This one-day event is being held at the Village Hotel Cardiff on Thursday 8 September and will be open to delegates from both the public and private sector. The conference raises the question: 'How Safe Is My Hospital?' - challenging attendees to look at their hospital with renewed vigour.

Every day healthcare estates are under attack in one form or another from both internal and external sources affecting patient safety and the patient environment. Is your hospital safe from government and public scrutiny? Do you keep up to date with legislation as it continues to be revised and are able to demonstrate compliance? How safe is your water supply? In addition to this, the threats to hospital security systems is rising. With information being an essential asset within the hospitals, sensitive or critically important data can be lost in a number of ways - including system failure, data theft, inappropriate usage, unauthorised access and cyber-attacks using computer viruses.

In response to these questions, a plethora of expert speakers from across the healthcare estates sector will be leading discussions on key the themes: Water Safety, Governance and Compliance, Hospital Resilience and Hospital Security of IT Systems.

This regional event will feature a variety of expert speakers from across the UK presenting sessions that will have a universal appeal for attendees from across the UK.
